A PROPOSAL FOR OMEGA NANNIES

The Omega Nannies Operating System

One private platform for families, nannies and the Omega team — built on the brand families already trust.

October 2026 · Working software, tested and ready for your accounts

VISION

Every placement, from enquiry to review, in one place

Families

Find a vetted nanny, get a clear quote, pay safely and stay in touch — without chasing emails.

Nannies

A professional home: offers to accept, today's schedule, documents and a profile they control.

The Omega team

Vetting, matching, quotes, payments and reports — with every sensitive action recorded.

Founder-led care, run like a well-organised private office.

THE PROBLEM

The website wins trust — then the work moves to inboxes

What omeganannies.com does well today

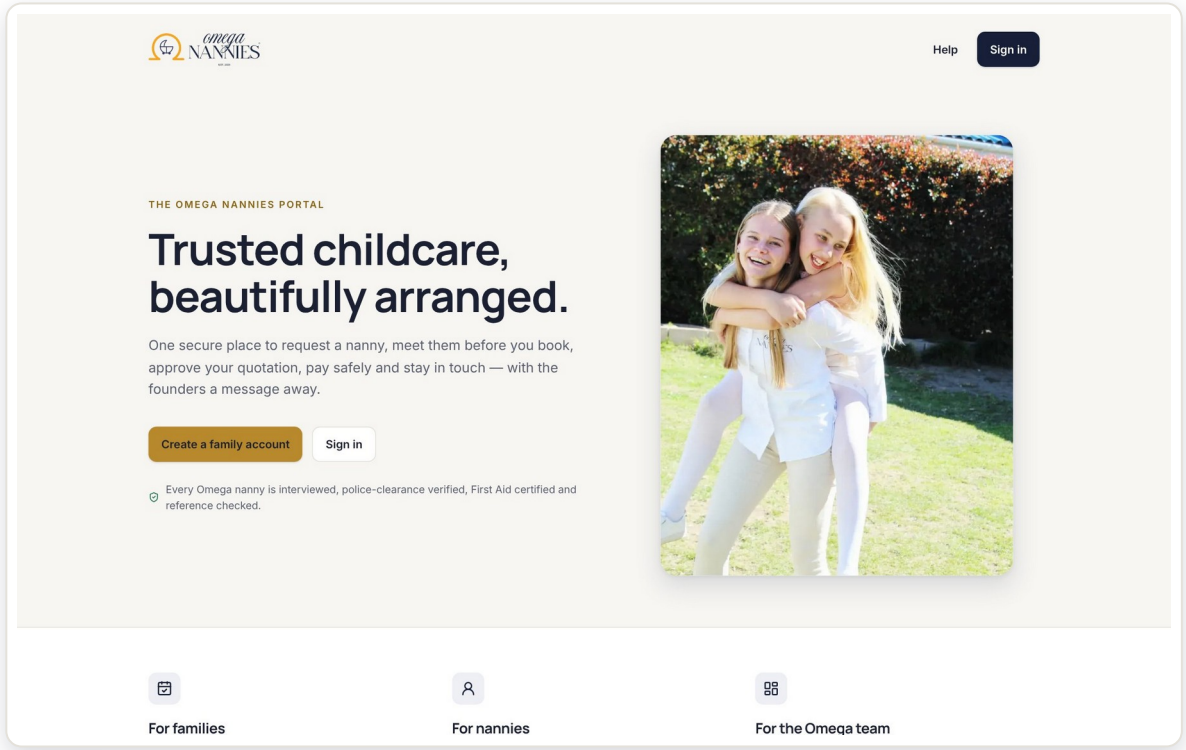

- Beautiful brand and founder story
- 17 nanny profiles with photos
- Rates, FAQ and vetting promise
- Enquiry form with POPIA consent

What happens after the enquiry

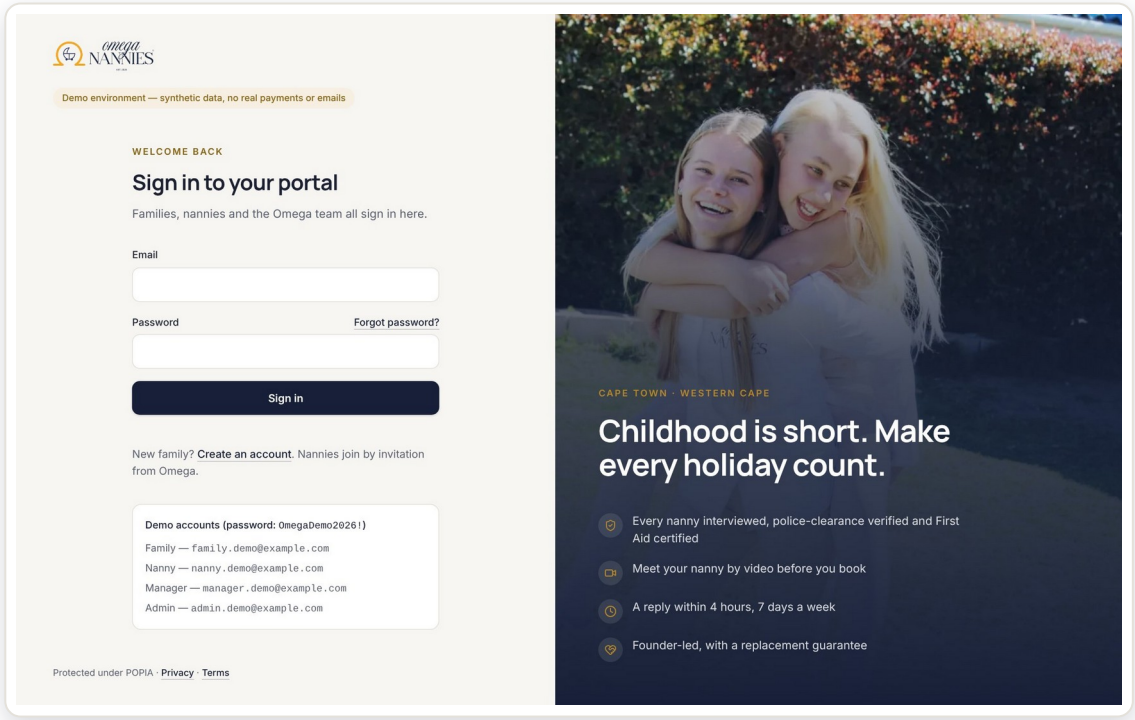

- No accounts for families or nannies
- Vetting and documents tracked by hand
- No shared view of who is free — double-booking risk
- Quotes, deposits and EFTs reconciled manually
- Children’s details and IDs travel by email

REDESIGNED EXPERIENCE

Calm, premium software that still feels like Omega

Landing page with Omega's own photography and promise.

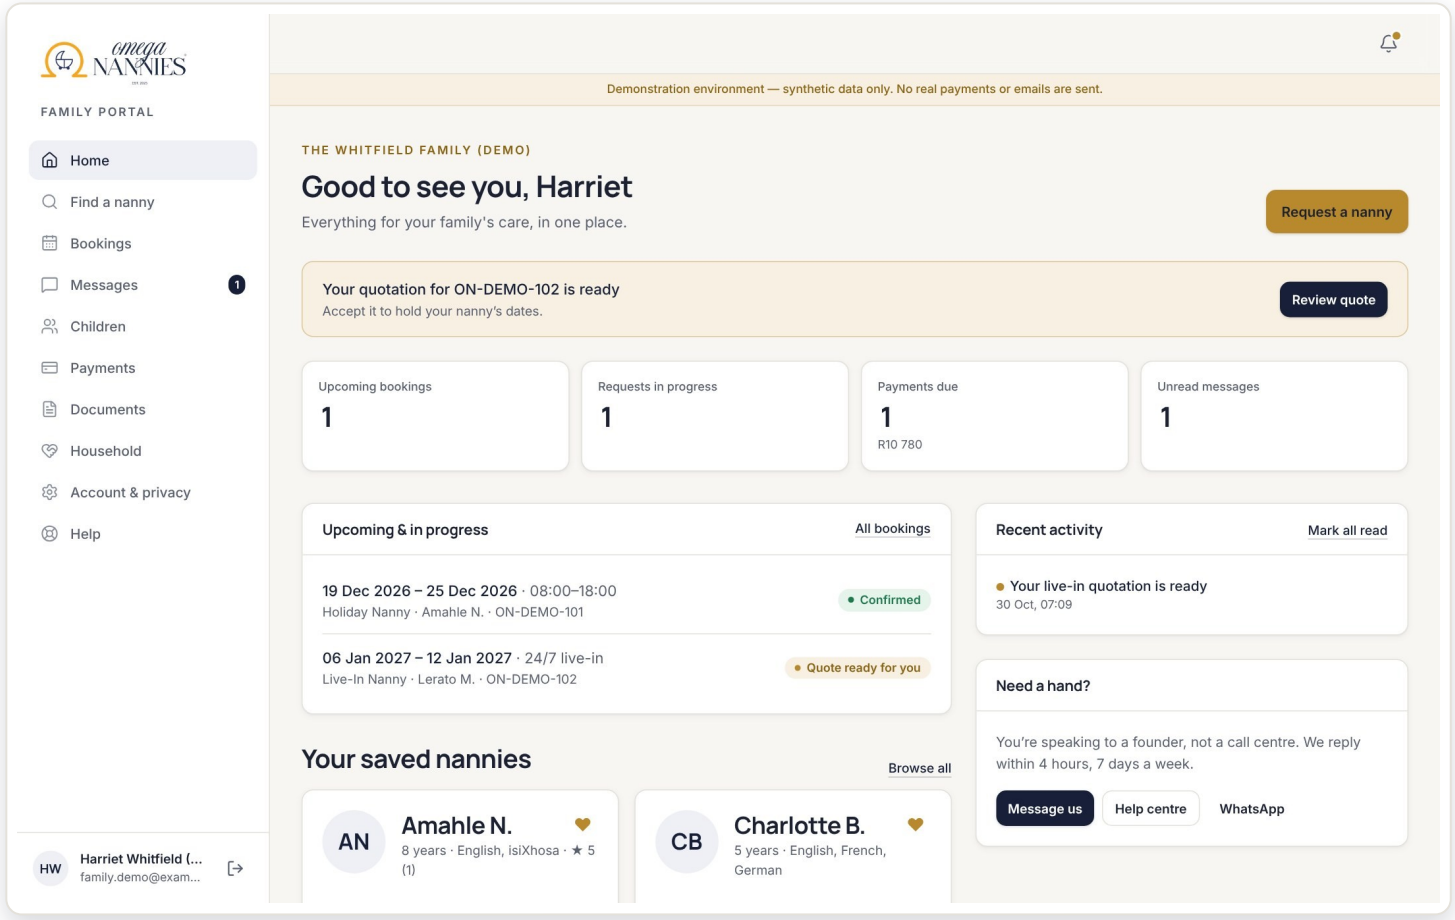

Sign-in for families, nannies and staff — one secure door.

Design system: Manrope + Inter typefaces (self-hosted), navy and gold from the brand, accessible contrast, icon navigation and a phone-first tab bar.

FAMILY PORTAL

Families see their nanny, their quote and their next step

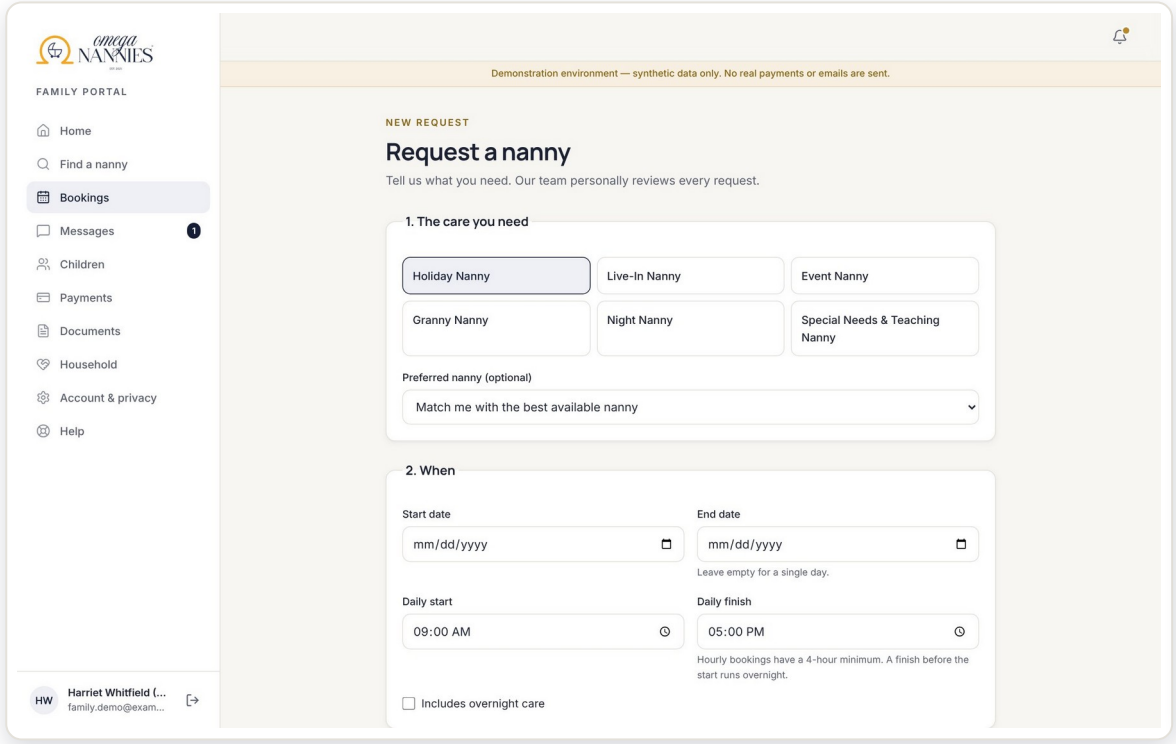

Discover
Browse approved nannies, shortlist favourites, compare.

Request
Dates or set weekdays, live-in, driver, language and budget.

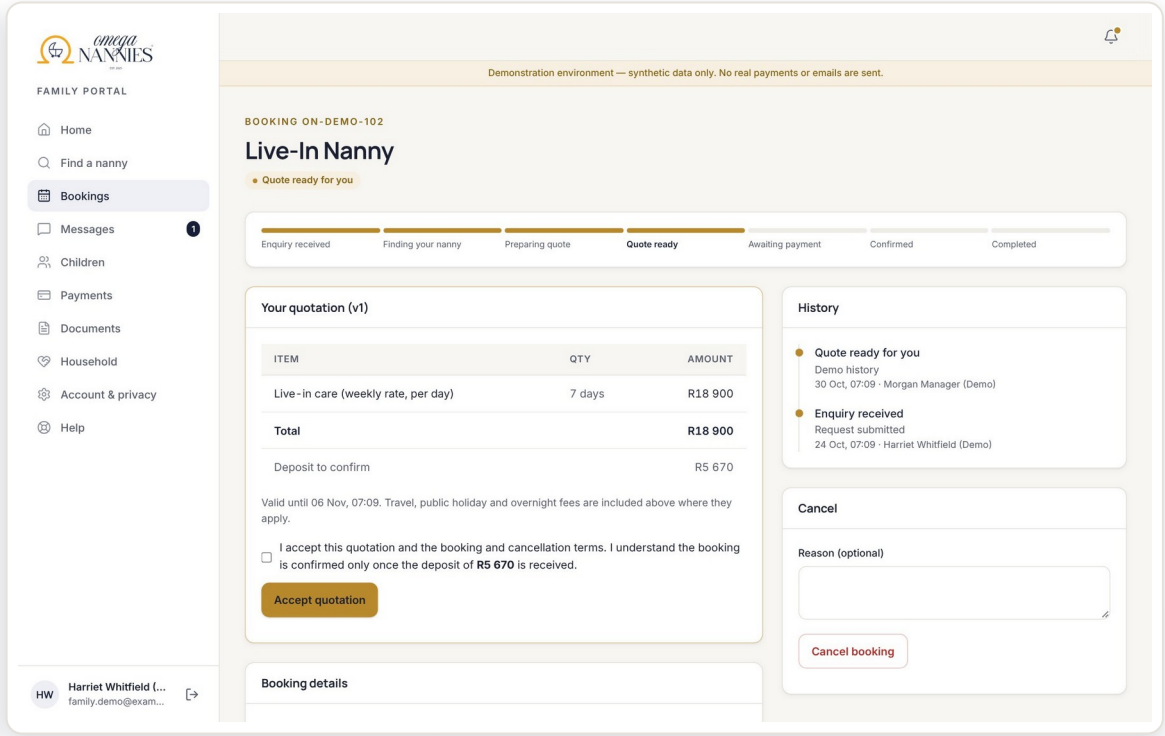

Quote & pay
Clear quote, deposit online, printable receipts.

Stay in touch
Messages and updates — no lost WhatsApps.

Requests that fit real family life

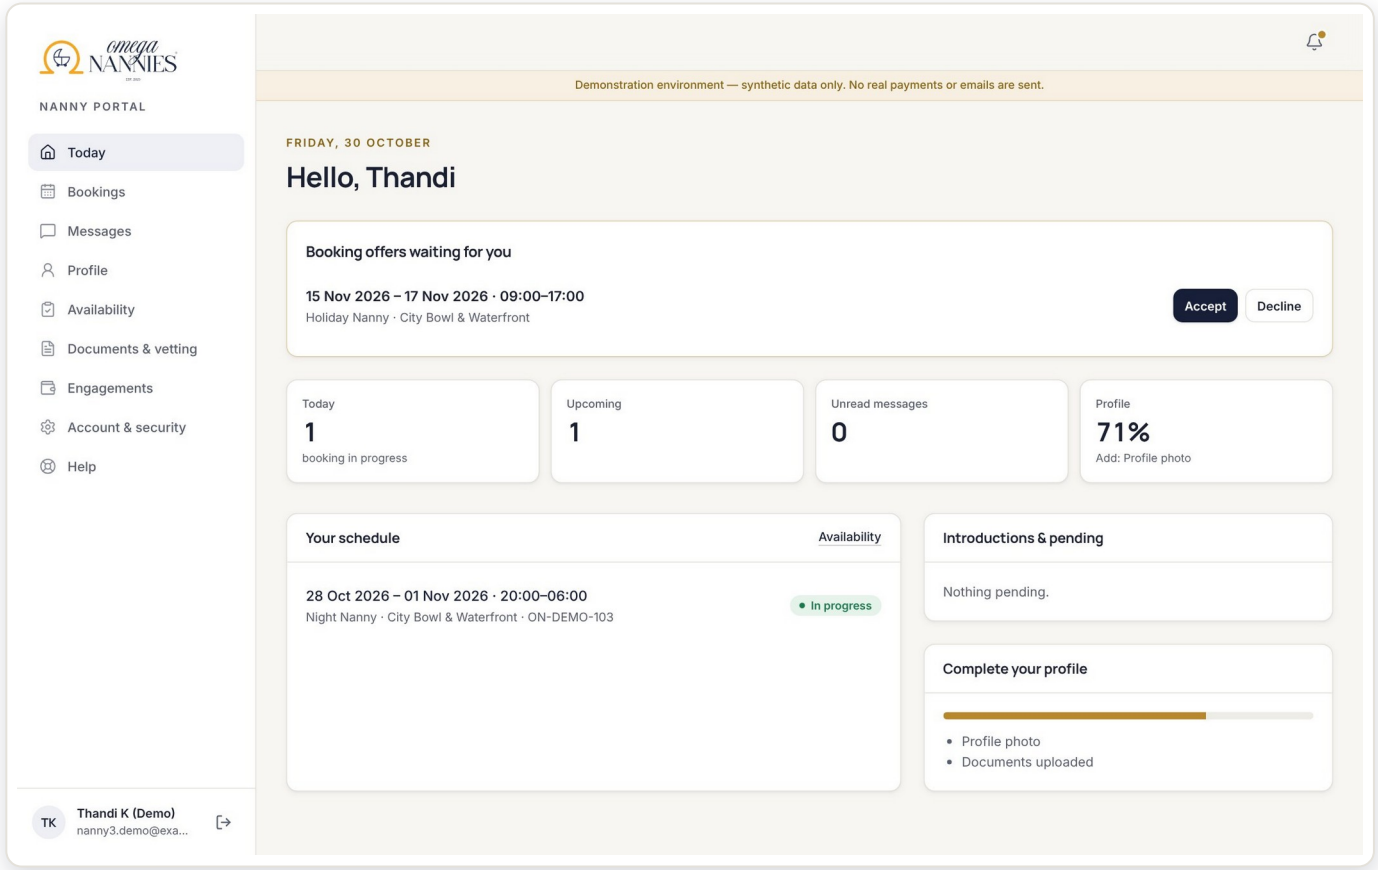

Request: service, dates or chosen weekdays (e.g. Mon/Wed/Fri), times and extras.

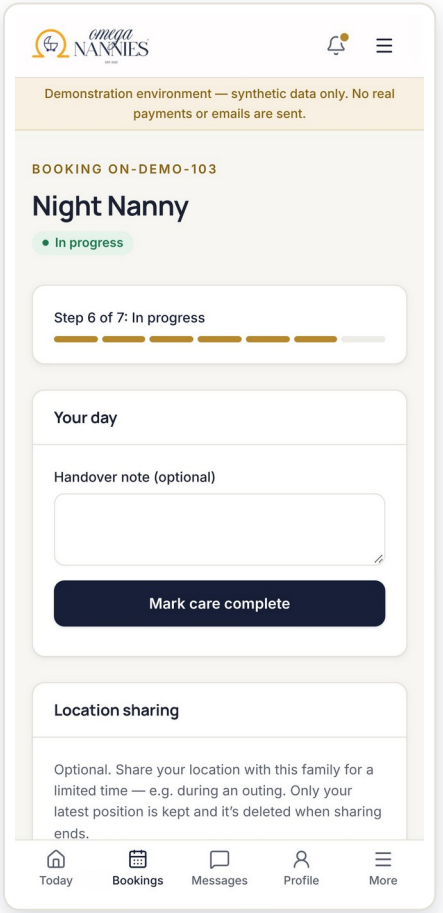

Quote: itemised, priced from Omega's price book; the nanny is held once the family accepts.

NANNY PORTAL

Nannies accept offers and run their day from their phone

Offers
Accept or decline — only the area is shown until accepted.

On the day
Check in, care notes, opt-in location sharing.

Documents
Upload ID, police clearance and first aid securely.

Profiles prepared by Omega, claimed securely by each nanny

1

Prepare
Create, import from the website, or CSV — no email needed

2

Invite
Single-use link, 7 days, revocable

3

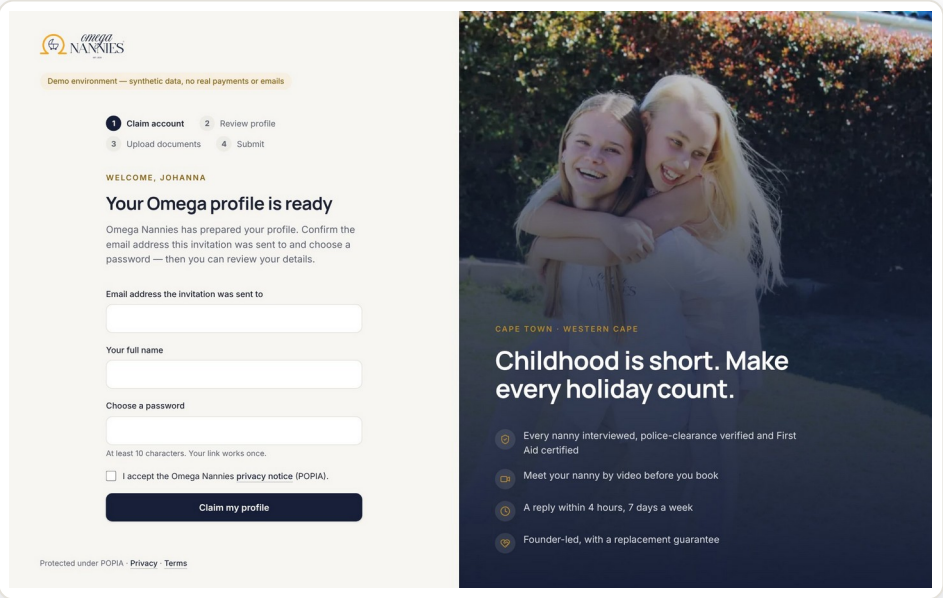

Claim
Works only with the invited email

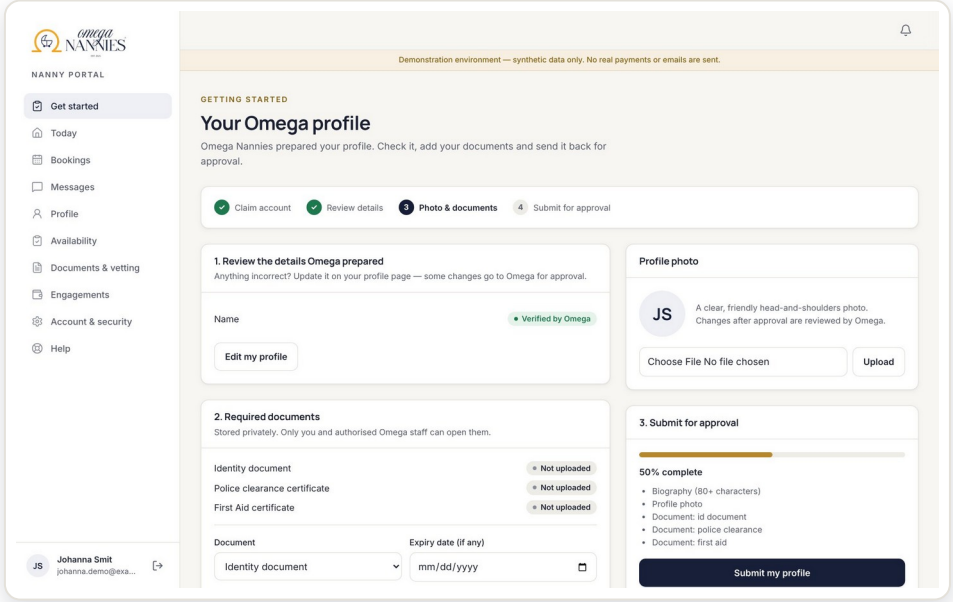

4

Onboard
Confirm details, upload documents and photo

5

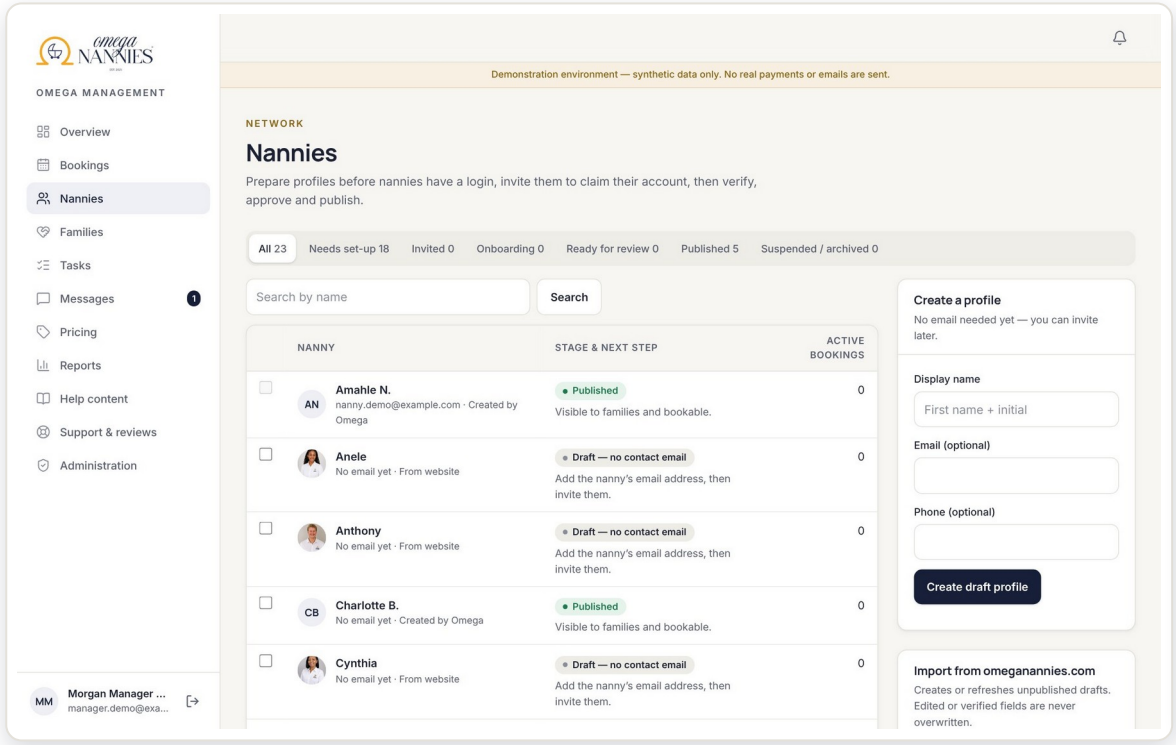

Approve
5 checks + 3 documents, then publish

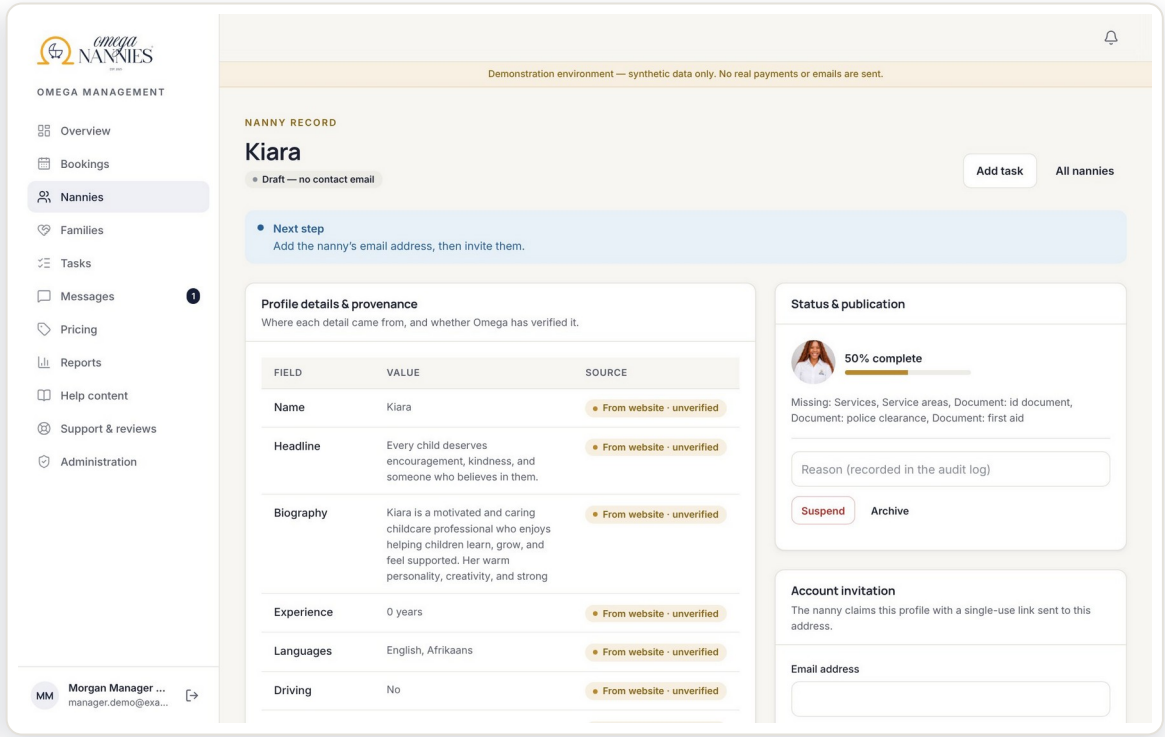

- Tokens stored only as fingerprints
- 5 wrong attempts revoke the link
- Two claims at once → exactly one account
- Claiming never approves a nanny

Every detail shows where it came from and who verified it

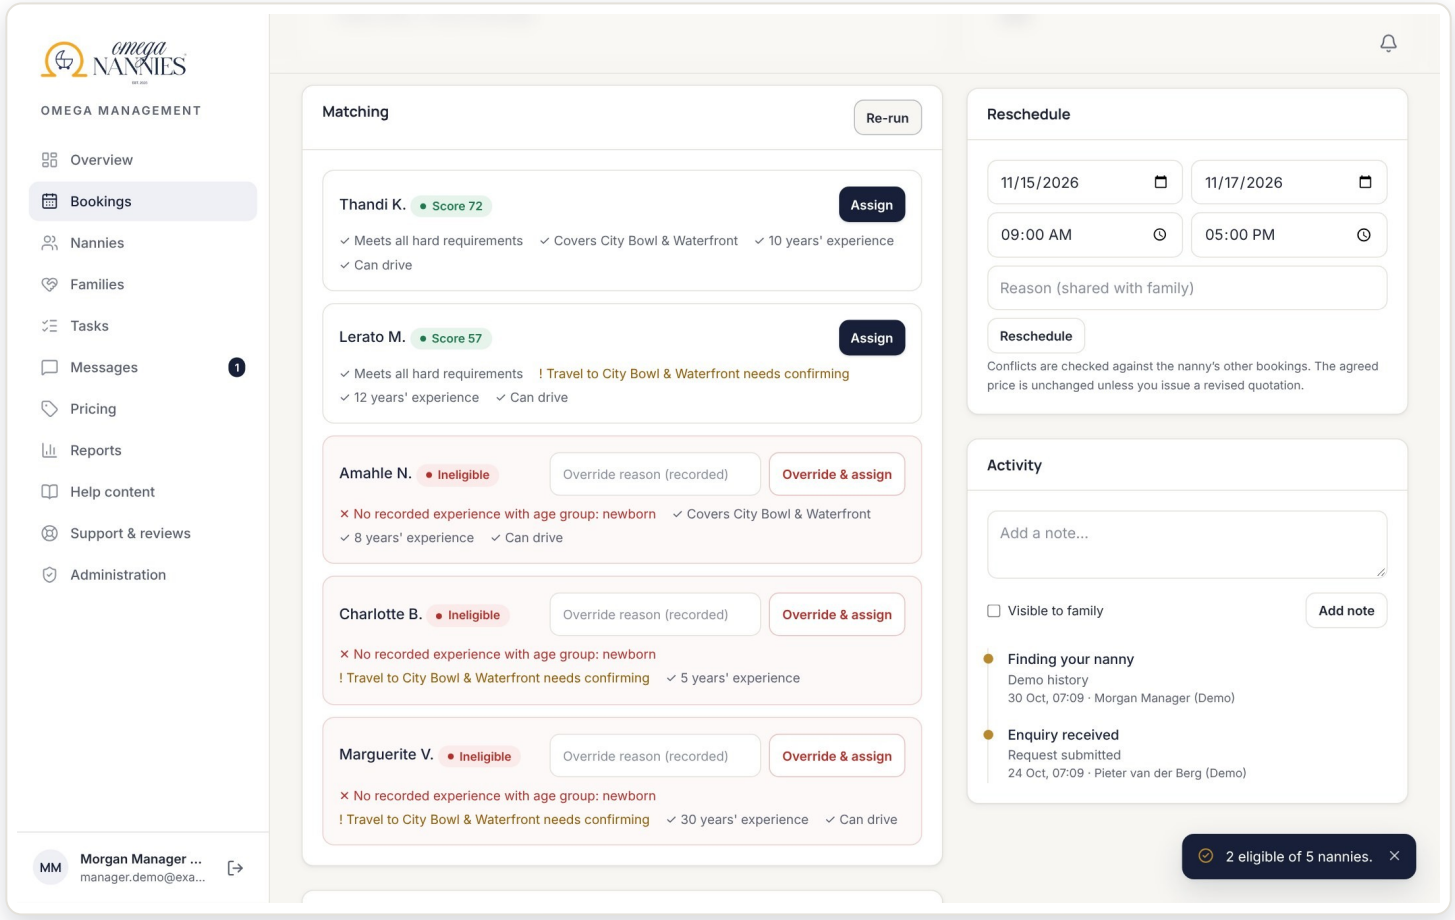

Lifecycle board: needs set-up, invited, onboarding, ready for review, published.

Website imports arrive as unverified drafts. Edited or verified fields are never overwritten.

Recommendations with reasons — Omega makes the call

Must-haves

Current vetting, service, children's ages, languages, driving, no clashing booking or leave.

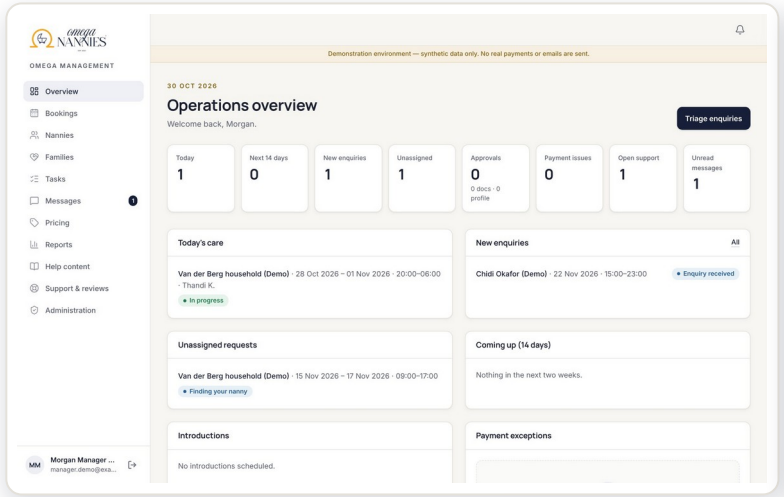

Preferences

Area, experience, requested nanny, past placements with the family.

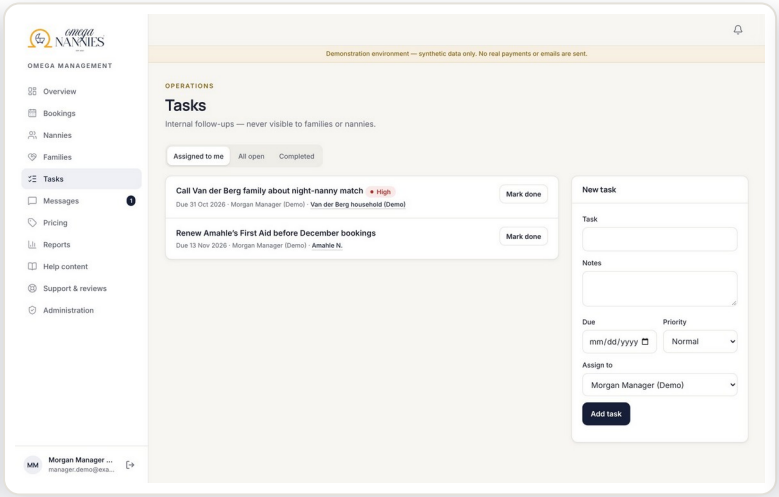

Override

Staff can assign anyway — with a recorded reason.

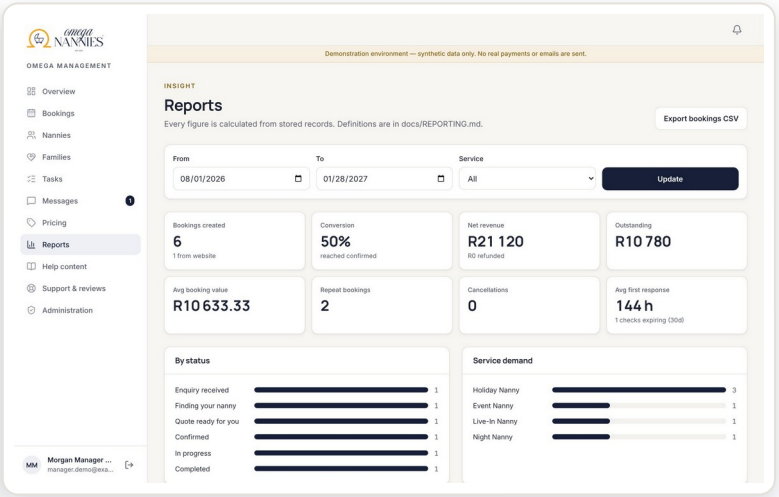

Queues, tasks and reports — nothing falls through

Overview: today's care, new enquiries, approvals, payment exceptions.

Tasks: follow-ups, plus automatic flags for duplicate payments and unpaid holds.

Reports: conversion, revenue, outstanding, utilisation; CSV export.

Also included: versioned pricing · quotation builder · EFT recording and refunds · families and children records · help centre · support and review moderation · staff permissions · audit log.

SECURITY & PRIVACY

Built for a business that holds children's data

Addresses private
Revealed to the nanny only from the point Omega sets.

Secure claiming
One-time, expiring, email-bound links.

Staff two-step sign-in
Mandatory for everyone in management.

Verified payments
Signed notices only; replays and duplicates caught.

No double-booking
The database refuses overlapping holds.

Private documents
Signed links; virus-scan hook; every view logged.

POPIA rights
Own-data export, corrections, account closure.

Everything audited
Approvals, overrides, payments and exports.

Each control is covered by automated tests that attempt the attack. A professional penetration test is still recommended before launch.

INTEGRATIONS

What is connected today — and what needs your accounts

Integration	What it does	Status	Needed to go live
omeganannies.com import	Brings public nanny profiles and photos in as private drafts	**Working — 17 imported**	Nothing
Website enquiries	Enquiry form posts securely into the platform	**Built**	Small change on the website + shared secret
PayFast	Card/EFT deposits and balances, verified notifications	**Built & tested**	Merchant account; one sandbox test
Email (Resend)	Invitations, confirmations, reminders	**Built**	API key + verified sending domain
Document storage	Private bucket for IDs and certificates	**Built**	Supabase project
Virus scanning	Scans every upload; infected files blocked	**Built**	ClamAV service
Calendar & help assistant	Nanny calendar feed; FAQ-grounded assistant	**Working / optional**	Optional AI key

No credentials were invented. Administration shows each integration's real status.

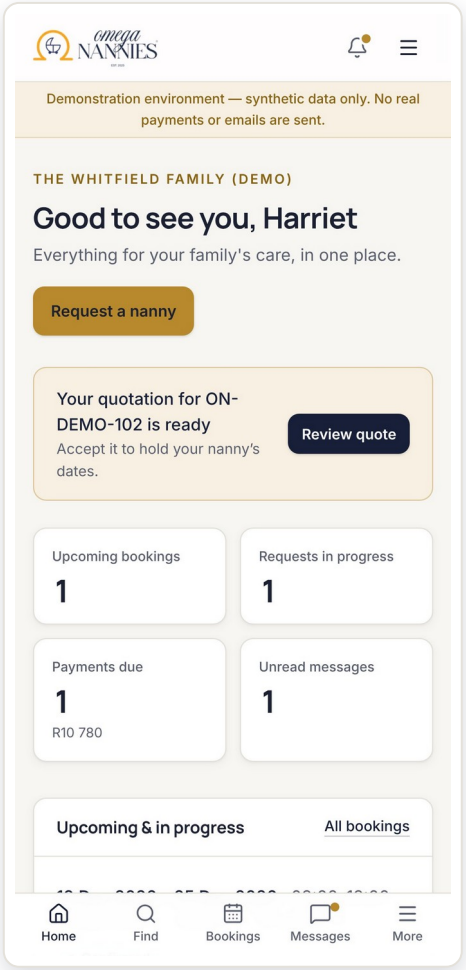

MOBILE & APP

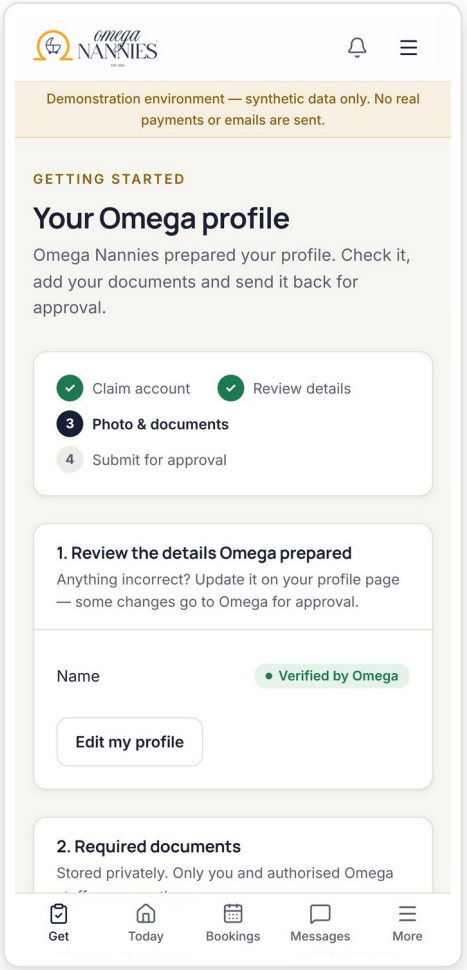

Works like an app on every phone — no app store needed

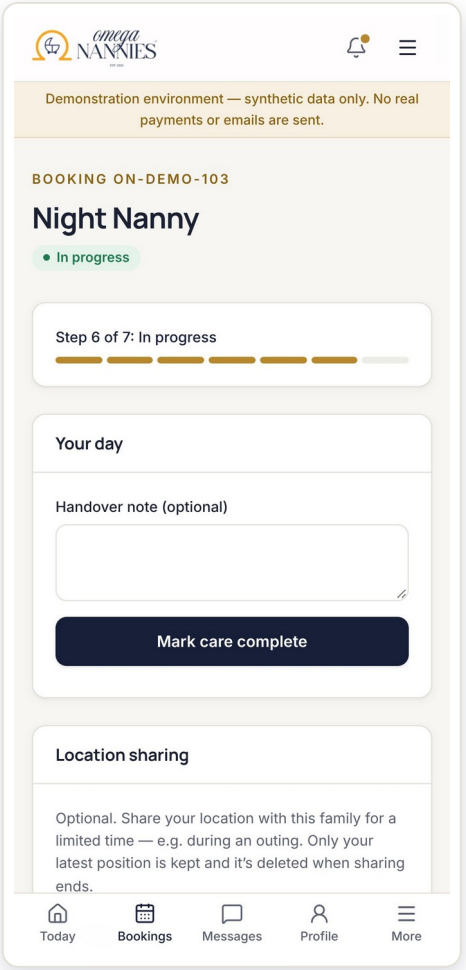

Install to home screen
Progressive web app with Omega icon.

Phone-first navigation
Bottom tabs; key actions first.

Private by design offline
Only the app shell is cached — never personal data.

QUALITY & HONESTY

Five audit cycles, every finding logged

5
audit cycles

53
findings logged

53/53
unit & integration tests

29/29
browser tests

Examples fixed: a second payment tab could double-count a deposit · forms lost typing after an error · unpaid holds could block a nanny indefinitely · low-contrast text · unsafe demo/live configuration.

Honest status: a tested release candidate, not yet live. It needs your PayFast, email, storage and hosting accounts, a virus scanner, a penetration test and a legal review of the privacy notice before real families use it.

FUTURE EXPANSION

Room to grow — options, not commitments

Nanny payouts
Once the compensation model is agreed.

WhatsApp & SMS
Reminders where families already are.

Two-way calendar sync
Google and Apple calendars.

Referrals & loyalty
Reward the families who refer others.

New regions
Areas and pricing per region.

Deeper insight
Demand forecasting by season and area.

NEXT STEP

A two-week pilot to go live

1. Connect your accounts: hosting, PayFast, email, storage, virus scanning
2. Confirm rates, deposit, cancellation and refund policies
3. Review the 17 imported profiles and invite your nannies
4. Run three real bookings end to end in PayFast sandbox
5. Penetration test and privacy-notice review, then launch

The software is ready. What remains are your accounts, your decisions and two outside reviews.
